

3M CodeFinder

A comprehensive medical coding software using expert logic to streamline ICD-10, CPT, and HCPCS code assignment for healthcare organizations.

<https://www.3m.com>

Overview

3M™ Codefinder™ Software is a sophisticated, logic-based medical coding solution designed to assist both novice and expert coders in healthcare organizations with accurately assigning codes to diagnoses and procedures. The software is built on a foundation of expert logic that originated in 1982, making it a long-standing and trusted tool in the Health Information Management (HIM) space.

Product Overview and Key Benefits

The primary goal of 3M CodeFinder is to improve coding accuracy, increase efficiency, and ensure compliance with constantly changing regulatory standards. It is particularly beneficial for medium to large healthcare organizations, such as hospitals, clinics, and insurance companies, that handle a high volume of patient data. The software is often used as the coding engine for larger 3M systems, such as the 3M™ 360 Encompass™ System.

Main Features and Capabilities

Comprehensive Code Database: Access to an extensive, up-to-date library of ICD-10, CPT, and HCPCS codes.

Automated Code Suggestions: AI-driven algorithms and robust terminology mapping tools provide intelligent code recommendations based on clinical documentation.

Integrated Encoder and Grouper: Utilizes a built-in encoder and provides accurate AR-DRG grouping capabilities for national and state-based reimbursement methodologies.

Logic-Based Coding Pathways: Guides coders through a series of clinically-driven logic paths to ensure the correct code is chosen, regardless of the entry route.

Real-time Compliance Checks: Code edits are integrated seamlessly to continuously check assigned codes against national and proprietary rules, helping to reduce errors and claim denials.

Seamless Integration: Designed to integrate with existing Electronic Health Record (EHR) systems, hospital information systems (HIS), and other 3M documentation and management products.

Customizable Workflows and Reporting: Provides robust reporting tools and flexible workflow configurations to tailor the software to specific organizational needs.

Target Users and Use Cases

Target Users: Medical Coders, Health Information Management (HIM) professionals, Revenue Cycle Management (RCM) teams, and hospital administrators.

Use Cases: Streamlining inpatient and outpatient medical coding, ensuring compliance with mandated coding rules, improving coder productivity, optimizing reimbursement, and providing quality data for decision support.

Key Features

- Comprehensive ICD-10, CPT, and HCPCS Database
- Automated Code Suggestions (AI-driven)
- Integrated Encoder and Grouper (AR-DRG)
- Real-time Compliance and Edit Checks
- Logic-Based Coding Pathways (Expert Logic)
- Seamless EHR and HIS Integration
- Customizable Workflows and Reporting
- Computer-Assisted Coding (CAE Edition)

Pricing

Model: enterprise

Enterprise subscription model. Pricing is not publicly disclosed; contact the vendor (now Solventum) for a quote.

Target Company Size: medium, enterprise

Integrations

Electronic Health Record (EHR) Systems, Hospital Information Systems (HIS), Medical Billing Systems, 3M Document Management Suite (e.g., ChartScript, ChartView)

Compliance & Certifications

HIPAA, SOC2, ICD-10, CPT, HCPCS, National Coding Standards (CCHI)
