

AdvancedMD Behavioral Health

All-in-one cloud-based practice management, EHR, and patient engagement platform designed for independent behavioral and mental health practices.

<https://www.advancedmd.com>

Overview

AdvancedMD Behavioral Health is a unified, cloud-based software-as-a-service (SaaS) platform built specifically to meet the unique needs of independent behavioral and mental health practices, from solo practitioners to small-to-medium group practices. It combines Electronic Health Records (EHR), Practice Management (PM), and Patient Engagement tools into a single, integrated suite, accessible anytime, anywhere, on any device. The platform is hosted securely on Amazon Web Services (AWS), ensuring high stability and data security.

Key Features and Capabilities:

Specialty-Specific EHR: Includes customizable templates, note options, and intake forms aligned with DSM-5 criteria, supporting detailed clinical documentation, treatment planning, and progress tracking for conditions like depression, anxiety, addiction, and PTSD.

Hands-free Notetaking: Utilizes natural language processing tools to speed up patient encounter data entry and limit computer time for providers.

Integrated Telehealth: Provides built-in telemedicine capabilities for remote sessions, enhancing patient access and continuity of care.

Practice Management: Offers comprehensive tools for scheduling, credit card processing, medical billing, claims management, and reporting. It is known for its strong billing and claims scrubbing features, aiming for a high clean claims rate.

Patient Engagement: Features a patient portal, automated appointment reminders (text/email), electronic check-in, online messaging, medication refills, and self-scheduling to reduce no-shows and streamline workflows.

Compliance & Reporting: Includes complete reporting tools to help practices meet regulatory requirements for MIPS, MACRA, and other value-based care initiatives.

Target Users and Use Cases: The software is ideal for solo, small, and medium-sized independent practices, including counseling, psychology, and psychiatry. A specific offering, 'AdvancedMD Now,' is tailored for small mental health groups or solo practices (1-3 providers) seeking an affordable, quick-to-implement solution.

Key Features
