Overview

Alleva is a comprehensive, cloud-based Electronic Health Record (EHR) system that combines Electronic Medical Record (EMR), Customer Relationship Management (CRM), and Revenue Cycle Management (RCM) into a single, unified platform for the behavioral health and addiction treatment industry. The platform is designed to simplify complex workflows, reduce administrative burden, and improve client outcomes for treatment programs of all sizes, from startups to multi-location enterprises.

Key Features and Capabilities: Alleva offers a suite of tools tailored for clinical and administrative efficiency. These include integrated telehealth with HIPAA-compliant Zoom video conferencing, advanced medication management with ePrescribe, and a customizable client portal and mobile app for patient engagement. The system leverages Artificial Intelligence (AI) with tools like 'Echo,' a HIPAA-compliant ambient AI that generates structured, audit-ready notes in real-time without saving recordings, and 'TravisAI' for in-app workflow support. For business intelligence, Alleva Insights provides customizable dashboards and real-time analytics, helping providers make data-driven decisions. Automated auditing and compliance tracking are built-in to ensure regulatory adherence.

Target Users and Use Cases: Alleva is exclusively built for the behavioral health space. It serves a wide range of providers, including behavioral health centers, addiction treatment centers, and mental health facilities. The platform supports various care environments such as residential treatment, detox programs, and intensive outpatient (IOP) and outpatient programs (OP).
