

Alora Health

An all-in-one, cloud-based Electronic Medical Record (EMR) and Electronic Visit Verification (EVV) software for home health, home care, and hospice agencies.

<https://www.alorahealth.com>

Overview

Alora Home Health Software is a comprehensive, cloud-based Electronic Medical Record (EMR) solution designed to streamline the entire workflow for home health, home care, and hospice agencies. The platform integrates clinical, administrative, and financial processes, enabling agencies to transition to a paperless system for enhanced efficiency, accuracy, and compliance.

Key Features and Capabilities:

Electronic Visit Verification (EVV): Fully integrated and compliant with the 21st Century Cures Act, offering both GPS-based mobile app check-ins and Telephony options. It provides live monitoring of visits with alerts for delays and no-shows.

Complete Clinical Documentation: Supports all disciplines with easy-to-use charting, including comprehensive OASIS assessments with a built-in Analyzer/Scrubber to spot inconsistencies and maximize reimbursement. It also supports non-OASIS documentation and Plan of Care generation.

Offline Functionality: Native offline applications for iPhone, iPad, and Android allow clinicians to document at the patient's bedside and capture electronic signatures without needing an internet connection, transmitting data with one click when connectivity is restored.

Billing and Revenue Cycle Management: Automates billing for all payer types, including Medicare, Medicaid/Waiver, Managed Care, Private Insurance, and Private Pay. Features a pre-billing Quality Assurance tool to double-check accuracy and compliance.

Agency Management: Includes powerful scheduling options, automated open-shift notifications, HR functions (credentialing and expiration tracking), and a built-in electronic faxing tool.

Target Users and Use Cases: Alora is an ideal solution for home health, home care, hospice, and pediatric homecare agencies of all sizes, from small family-owned startups to large multi-office enterprises. Its primary use cases are ensuring regulatory compliance (CMS, HIPAA, EVV), maximizing

revenue through accurate billing, and improving caregiver efficiency through mobile and paperless documentation.

Key Features

- Electronic Visit Verification (EVV) (GPS/Telephony)
- OASIS Assessments with Built-in Analyzer
- Automated Billing for All Payers (Medicare/Medicaid)
- Native Mobile App with Offline Charting
- Scheduling and Live Visit Monitoring
- Pre-billing Quality Assurance
