

Arine Elevate

AI-powered Medication Therapy Management (MTM) solution for health plans to maximize CMS Star Ratings and care team efficiency.

<https://www.arine.io/elevate-mtm>

Overview

Arine Elevate is a comprehensive, AI-driven Medication Therapy Management (MTM) and quality improvement solution designed for health plans and at-risk provider organizations. The platform leverages Arine's proprietary **Medication Intelligence** by integrating diverse data sets—including clinical records, pharmacy data, claims data, and Social Determinants of Health (SDoH)—to create a holistic view of each member's medication experience. This deep analysis allows the platform to move beyond 'check-the-box' MTM to drive significant clinical and economic outcomes.

Key Benefits and Outcomes:

Achieve High CMS Star Ratings: Clients have achieved 4-5 Stars on MTM, Part C, and Part D measures.

Improve Efficiency: The platform automates workflows, generating personalized care plans, member education materials, and prescriber communications, which has been shown to improve care team efficiency by 5-10 times.

Reduce Costs and Hospitalizations: Arine's solutions have demonstrated a greater than 10% decrease in total cost of care and a 40% reduction in hospitalizations.

Main Features and Capabilities:

AI-Powered Prioritization: Uses predictive algorithms to identify and prioritize individuals most at risk for medication-related problems for just-in-time interventions.

Comprehensive Data Integration: Analyzes clinical, behavioral, and social data, including SDoH factors, to uncover diverse member needs and address disparities.

Automated Workflow Engine: Streamlines and automates tasks, intelligently assigning them to the most qualified care team member.

Personalized Care Plans: Automatically generates customized care plans and tailored recommendations for members and prescribers.

Live Dashboards & Reporting: Provides near real-time dashboards to track MTM program performance, quality measures (Star Ratings, HEDIS, CAHPS), and clinical/economic impact.

Target Users: The software is primarily for **Health Plans** and **At-Risk Provider Organizations** (e.g., ACOs) managing Medicare, Medicaid, Special Needs, and Commercial populations.

Key Features

- AI-Driven Medication Intelligence
- CMS Star Ratings Optimization (4-5 Stars)
- Automated MTM Workflow & Task Assignment
- Social Determinants of Health (SDoH) Integration
- Personalized Care Plan Generation
- Live Performance Dashboards & Reporting
- HEDIS/CAHPS Measures Enhancement
- Prescriber Communication Automation

Pricing

Model: enterprise

Subscription-based licensing model for enterprise healthcare organizations (health plans, at-risk providers). Pricing is not publicly disclosed and requires direct consultation.

Target Company Size: enterprise

Integrations

EHR Systems (Implied), Pharmacy Claims Data Systems, Medical Claims Data Systems

Compliance & Certifications

HIPAA, HITRUST CSF
