

ARUP AnalyticsDx

A laboratory data analytics suite that provides hospital and lab leaders with real-time, comprehensive insights into test utilization, operations, and cost savings.

<https://www.aruplab.com/>

Overview

ARUP AnalyticsDx is a comprehensive suite of data analytics dashboards designed for laboratory leaders and hospital executives to optimize test utilization, improve operational efficiency, and drive system-wide cost savings. The suite is composed of two main products: **AnalyticsDx Sendout** and **AnalyticsDx Comprehensive**.

AnalyticsDx Sendout is a no-cost dashboard available to all ARUP clients, providing real-time analytics to track testing sent to ARUP, allowing lab managers to quickly identify misutilization and savings opportunities for reference testing.

AnalyticsDx Comprehensive is the premium, consultative solution that vastly improves upon the Sendout tool by aggregating all testing data—including inpatient, outpatient, ambulatory, outreach, and referral testing—for a complete, holistic view of a health system's laboratory operations.

The platform replaces multiple, discordant data systems with one cohesive, visual tool, allowing for the customization of detailed, real-time reports on ordering trends, operations metrics, and turnaround times (TAT).

Key capabilities include physician and facility benchmarking, DRG breakdown, and the ability to identify insourcing opportunities to bring testing in-house for greater efficiency and cost-effectiveness. Clients using the Comprehensive tool are paired with ARUP's Healthcare Advisory Services team to customize the dashboards, identify opportunities, and implement lasting interventions.

Data is handled via a secure, HIPAA-compliant process where client data is sent via Secure File Transfer Protocol (SFTP) to ARUP's secure, on-site servers and accessed through a secure viewing portal, requiring no software installation on the client's side.

Key Features

- Comprehensive data aggregation (inpatient, outpatient, sendout)
- Real-time test utilization monitoring

- Physician and facility benchmarking
- Turnaround Time (TAT) tracking and metrics
- Customizable reports and dashboards
- Identification of insourcing and savings opportunities
- Diagnosis-Related Group (DRG) breakdown
- Integrated guidance from medical directors

Pricing

Model: freemium

AnalyticsDx Sendout is a no-cost dashboard for ARUP clients. AnalyticsDx Comprehensive is a premium, consultative solution that requires a custom quote based on the scope of implementation and advisory services.

Target Company Size: enterprise

Compliance & Certifications

HIPAA, HITECH, GDPR, CLIA, CAP ISO 15189
