

AxisCare Matching

AI-powered caregiver-client matching and intelligent scheduling solution for non-medical home care agencies.

<https://axiscare.com>

Overview

AxisCare Matching is a core, AI-powered feature within the comprehensive AxisCare Home Care Software platform, designed to optimize scheduling and enhance the quality of care through intelligent caregiver-client assignments. The system uses advanced algorithms to perform **AI-Powered Caregiver Matching**, considering a wide range of data points to ensure the best fit for every visit. This includes matching based on caregiver availability, skills, certifications, acceptable driving distance, preferred weekly hours, overtime status, schedule history, and specific client/caregiver preferences (e.g., pet allergies, smoking environment, gender preference).

This capability automates the complex process of filling open shifts, significantly reducing administrative burden and minimizing the risk of human error. It also empowers caregivers through the **AxisCare Mobile App** by allowing them to view and request open visits. When requesting a visit, the app displays an “**attribute score**” (a percentage) that clearly reflects how well their qualifications and preferences align with the client's needs and environment.

Beyond matching, the AxisCare platform provides a full suite of home care management tools, including Electronic Visit Verification (EVV) with GPS/Geofence, HIPAA-compliant two-way chat, robust billing and payroll integrations, custom reporting, and client/family portals. It is a highly-rated, scalable solution built for non-medical enterprise home care agencies of all sizes.

Key Features

- AI-Powered Caregiver Matching
- Real-Time Drag-and-Drop Scheduling
- Electronic Visit Verification (EVV) Compliance

- GPS Geofencing and Tracking
- Caregiver Mobile App (iOS/Android)
- Open Shift Request/Attribute Scoring
- VA and Medicaid Billing Services
- Billing and Payroll Integration

Pricing

Model: subscription
