Overview

billrMD is a comprehensive, cloud-based practice management (PM) and medical billing software solution built to simplify and automate the revenue cycle management (RCM) process for medical practices, billing companies, laboratories, and independent diagnostic testing facilities (IDTFs). The platform is a web-based application, requiring no additional downloads or software installation, and is accessible from any internet-connected PC. It is particularly well-suited for small to midsize practices looking for an affordable and scalable solution.

Key Features and Capabilities:

Revenue Cycle Management: Includes electronic claims submission through an integrated clearinghouse, claims scrubbing to ensure coding accuracy, denial management, and electronic remittance advice (ERA) for simplified payment reconciliation.

Practice Management: Features a robust, customizable scheduler with drag-and-drop arrangement, automated appointment reminders (via text/email) to reduce no-shows, and detailed patient records management.

Financial Insights: Offers customizable reports and real-time analytics to track key billing metrics, monitor claim statuses, analyze payment trends, and gain a comprehensive view of the practice's financial health.

Patient Engagement: Provides a HIPAA-compliant Patient Portal and a dedicated Patient App (for iOS/Android) that allows patients to view statements, make secure payments, and manage appointments 24/7.

Compliance & Security: The platform is fully HIPAA-compliant, featuring secure data encryption (256-bit SSL), daily backups, role-based access control, and audit logs to protect sensitive patient and

financial information.

By combining powerful RCM and PM tools into a single, user-friendly interface, billrMD aims to boost revenue, reduce administrative burden, and improve a practice's overall efficiency and financial health.
