---

## Overview

---

BridgeHead Elite Sports is a specialized solution that leverages BridgeHead Software's flagship **HealthStore® Clinical Data Repository (CDR)** and Vendor Neutral Archive (VNA), specifically tailored for the needs of elite sports teams, associations, and governing bodies. The primary function is to provide a central, secure repository for all an athlete's clinical data, including high-resolution medical images (like X-rays and MRIs) and historical medical records.

## Key Capabilities and Benefits

The solution is designed to address the unique challenges of sports medicine, where clinicians require immediate and secure access to data while traveling or working remotely. It allows Sports Exercise and Medicine (SEM) professionals to easily and securely upload, store, protect, share, review, and compare new and historical medical images and records.

**Secure Remote Access:** Data can be securely accessed from anywhere in the world on any device, which is crucial for clinicians traveling with teams.

**Faster Diagnosis:** By providing immediate access to a complete medical history, the system helps increase the speed of diagnosis and treatment, enhancing collaboration and improving athlete safety.

**Data Consolidation:** It eliminates data silos by aggregating patient and clinical information from across the healthcare enterprise and can assist in retiring costly and vulnerable legacy applications while retaining access to the data they contain.

**Interoperability:** Built on the HealthStore® platform, it ensures interoperability by adhering to industry standards like HL7 and FHIR, allowing for seamless data sharing across institutions and integration with core sports systems.

## Target Market

The solution is targeted at **Elite Sports organizations**, including professional teams (like the England and Wales Cricket Board and Southampton Football Club), associations, and governing bodies, and is used by clinicians and SEM professionals.

## Key Features

---

- Clinical Data Repository (CDR) / VNA
- Secure Remote Access on Any Device
- Medical Image and Record Consolidation
- Interoperability (HL7, FHIR)
- Data Compliance & Governance Support
- End-to-End Encryption and Access Controls
- Legacy Application Retirement

## Pricing

---

**Model:** enterprise

Pricing is not publicly disclosed and is provided upon request for enterprise-level deployment. The solution is based on the HealthStore® Clinical Data Repository, which is typically licensed for large organizations.

**Target Company Size:** enterprise

## Integrations

---

HL7, FHIR, EHR Systems (General)

## Compliance & Certifications

---

HIPAA, GDPR
