Brightly Biomed

Cloud-based CMMS module for managing biomedical equipment maintenance, compliance, and asset lifecycle in healthcare facilities.

https://www.brightlysoftware.com/products/biomed

Overview

Brightly Biomed is a specialized application within **TheWorxHub** CMMS platform by Brightly Software, a Siemens company, designed specifically for healthcare and senior living facilities to manage their biomedical equipment and ensure regulatory compliance.

The software acts as an asset-based tool that streamlines the entire lifecycle management of medical devices, focusing on maximizing equipment uptime and enhancing patient care. Its core value proposition is the automation of compliance-related workflows, which is critical in the heavily regulated healthcare environment. The platform includes built-in, up-to-date compliance standards for major accrediting bodies like **The Joint Commission, DNV, NFPA, and ACHC**.

Key capabilities include automated work order generation, scheduling of preventive maintenance (PM) for high-value assets, and real-time tracking to stay ahead of regulatory changes. It leverages advanced algorithms for **Predictive Maintenance Planning**, allowing facilities to forecast potential equipment failures and proactively address issues to ensure uninterrupted service and reduce unexpected costs. The platform is a cloud-based SaaS solution accessible via web browser and a dedicated mobile app, which empowers technicians with on-the-go access to update service requests, complete work orders, and use mobile barcode scanning for asset tracking.

Brightly Software serves over 12,000 clients globally, and the parent company is certified with **SOC 2 Type 2** and **ISO 27001**, demonstrating a strong commitment to data security and reliability. While users praise the extensive features and strong customer support, some note that the sheer volume of functionality can occasionally be overwhelming, and pricing is customized based on organizational needs.

Key Features

- Biomedical Equipment Asset Management

- Automated Preventive Maintenance (PM) Scheduling

- Compliance Tracking (The Joint Commission, DNV, NFPA)

- Mobile Work Order Management & Barcode Scanning

- Predictive Maintenance Planning

- Environment of Care (EOC) Rounding

- Real-time Reporting & KPI Dashboards

- Battery Management

Pricing

Model: enterprise

Subscription-based with customized pricing. Requires a direct quote based on the number of users and specific modules (TheWorxHub) required for the organization. Annual contracts are typical, with options for multi-year pricing.

Target Company Size: medium, enterprise

Integrations

Microsoft OneDrive, Dropbox

Compliance & Certifications

SOC 2 Type 2, ISO 27001, The Joint Commission, DNV, NFPA, ACHC
