---

## Overview

---

Canopy Care is an Intelligent Care Platform (ICP) and Enterprise AI solution specifically designed for oncology treatment centers to manage patient care that happens between visits. The platform integrates seamlessly with Electronic Medical Records (EMR) and Practice Management (PM) systems, providing a full suite of intelligent, interoperable tools to support continuous patient engagement and operational excellence.

### Key Features & Capabilities:

The core of Canopy Care is its Remote Patient Monitoring (RPM) solution, which utilizes Electronic Patient-Reported Outcomes (ePROs). This allows cancer patients and their caregivers to easily report symptoms from any device, ensuring the care team receives real-time updates. The platform then uses AI-native triage tools and symptom management pathways to systematically triage all reported symptoms, leading to high-quality, standardized care and a reported 93% faster resolution of patient requests.

### Business & Financial Impact:

Beyond clinical benefits, Canopy Care helps oncology practices drive revenue by operationalizing and automating reimbursement programs, including Chronic Care Management (CCM) and Principal Care Management (PCM). The platform's automated reimbursement capture and workflow tools allow practices to bill for services they may already be providing, resulting in a reported 4x increase in annual revenue for between-visit care.

### Proven Outcomes:

Studies and internal data have validated the platform's impact, showing results such as 22% fewer Emergency Room visits, prolonged time on treatment (up to 45% of patients stayed on treatment at 3 months with ePRO monitoring), and high patient engagement, with 90% of patients still engaged after six months.

### Target Users:

The platform is built for oncology practices, cancer treatment centers, and community oncology practices of all sizes, as well as for life sciences organizations looking to collect real-world patient experience data.

## Key Features

---

- Remote Patient Monitoring (RPM)
- Electronic Patient-Reported Outcomes (ePROs)
- AI-native Triage and Symptom Management
- Chronic Care Management (CCM) & Principal Care Management (PCM) Tools
- Automated Reimbursement Capture
- EMR/Practice Management Integration
- Oral Oncolytics Solutions
- Provider Workflow Tools

## Pricing

---

**Model:** enterprise

Canopy Care utilizes an enterprise pricing model. Pricing is not publicly disclosed and is custom-quoted based on the oncology practice's size, deployment needs, and the specific suite of solutions required (e.g., RPM, CCM/PCM tools, Oral Oncolytics).

**Target Company Size:** small, medium, enterprise

## Integrations

---

EMR (Electronic Medical Record), Practice Management Systems, OncoEMR

## Compliance & Certifications

---

HIPAA
