

Censinet RiskOps

Cloud-based RiskOps platform for healthcare that automates third-party and enterprise risk management to protect patient safety and data.

<https://www.censinet.com/>

Overview

Censinet RiskOps is the first and only cloud-based risk exchange platform purpose-built for healthcare organizations (HDOs) to consolidate and automate third-party risk management (TPRM) and enterprise risk management (ERM) workflows.

Product Overview & Key Benefits The platform replaces manual, spreadsheet-based risk assessment processes with automated workflows, significantly reducing the time and effort required to complete assessments—often to less than 10 days. It unifies siloed risk processes across departments like IT, BioMed, supply chain, and research, providing a single, actionable platform for continuous risk monitoring and mitigation. Key benefits include improved efficiency, enhanced risk visibility, faster remediation through automated corrective action plans, and better outcomes that reduce the impact of data breaches and service disruptions.

Main Features & Capabilities

Automated Workflows: Streamlines TPRM and ERM processes, including assessment, scoring, and remediation.

Digital Risk Catalog™: Provides access to a collaborative network of over 50,000 assessed vendors and products, enabling 1-Click Sharing of security questionnaires and evidence.

RiskOps Command Center: A real-time operations dashboard that aggregates risk posture, delivers actionable insights, and provides board-ready reports.

AI-Powered Solutions: Includes Censinet TPRM AI™ and Censinet ERM AI™ for end-to-end assessment automation and AI governance, aligning with frameworks like the NIST AI Risk Management Framework.

Active Portfolio Management: Features breach and ransomware alerts, risk tiering, and automated reassessment scheduling.

Target Users and Use Cases Censinet RiskOps is designed for healthcare delivery organizations (HDOs), including CIOs, CISOs, cybersecurity, IT, risk teams, GRC professionals, and supply chain leaders. Primary use cases include Third-Party Risk Management (TPRM), Enterprise Risk Management (ERM), Supply Chain Risk Management, Medical Device Risk Management, and ensuring compliance with healthcare-specific standards.

Key Features

- Automated Third-Party Risk Assessments (TPRM)
- Enterprise Risk Management (ERM)
- Real-time RiskOps Command Center Dashboard
- Digital Risk Catalog (50,000+ vendors)
- 1-Click Sharing of Risk Data
- Automated Corrective Action Plans (CAPs)
- Continuous Risk Visibility and Monitoring
- AI-Powered Assessment Automation
