

Clinicom

An adaptive, augmented intelligence platform for comprehensive mental health assessment and clinical decision support.

<https://clinicom.com>

Overview

Clinicom is an innovative, algorithmically driven, adaptive behavioral health technology designed to provide accurate and reliable mental health assessments. Leveraging over 15 years of clinical research data and augmented intelligence, it is the world's only comprehensive platform that can assess and monitor over 80 DSM-based mental health conditions from a single, adaptive assessment, typically completed by the patient remotely in under 30 minutes with a 94% completion rate. The platform is a Clinical Decision Support tool, not a diagnostic tool, that significantly aids clinicians in differential diagnosis and treatment planning.

Key Benefits & Capabilities:

Enhanced Clinical Workflow: Lowers staff workload by automating the comprehensive bio-psycho-social intake, including social determinants of health (SDOH), before the first visit. This allows clinicians to spend more time on treatment.

Augmented Intelligence: Uses proprietary adaptive machine learning algorithms (250+ clinically validated) to ensure objective, thorough, and bias-free assessments, adhering to DSM-5 criteria.

Automated Documentation: Automates the administration of SOAP notes and generates turnkey, detailed patient reports in minutes, reducing the clinical burden.

Metric-Based Care: Tracks and monitors treatment outcomes using scientifically validated measures, supporting evidence-based care plans.

Accessibility & Equity: The online assessment can be completed anywhere on any internet-capable device, enhancing access to care.

Clinicom is designed for a wide range of mental health professionals and organizations, from solo practitioners and small practices to large clinic networks, hospitals, EMRs, and government entities. Its

per-patient pricing model is often covered by major insurance carriers, including Medicaid, making it a cost-effective solution for improving patient outcomes and practice efficiency.

Key Features

- Adaptive Mental Health Assessment (80+ DSM conditions)
- Augmented Intelligence / Machine Learning
- Clinical Decision Support
- Automated SOAP Notes / Clinical Documentation
- EMR/EHR Integration (via API)
- Comprehensive Bio-Psycho-Social Intake
- Real-time Analytics & Statistical Reporting
- Multi-location Portal

Pricing

Model: usage_based

Usage-based per patient: \$12 per patient/year for completed assessments. Plans have minimum monthly usage fees (e.g., Solo/Small Practitioner is \$96/month min). Enterprise tier offers tiered volume discounts. Includes unlimited follow-ups for 12 months. Eligible for insurance reimbursement.

Starting at: USD \$96

Target Company Size: small, medium, enterprise

Integrations

Epic, eClinicalWorks, DrChrono, Cerner, ClinicTracker, Athena, Advanced MD, EMR/EHR systems

Compliance & Certifications

HIPAA, GDPR
