CoverMe

AI-driven insurance eligibility verification and coverage marketplace for healthcare providers to reduce uncompensated care and streamline patient admissions.

https://cover.me

Overview

CoverMe is a SaaS-enabled marketplace providing AI-driven solutions for acute and post-acute care providers to manage patient eligibility, coverage, and financial risk. The platform automates real-time insurance eligibility verification, financial investigation, and application prefill, dramatically reducing manual effort and accelerating admission decisions.

Key capabilities include **Coverage Discovery**, which utilizes proprietary data sources to pinpoint unidentified coverage from private payers, Medicare, and Medicaid, and a **Proprietary Scoring Engine** for real-time patient risk assessment and propensity-to-pay analysis. It also features a **Patient Balance Financing Marketplace** and tools for **Financial Assistance/Charity Screening**.

CoverMe helps hospitals and clinics navigate the complexities of rising uncompensated care, self-pay populations, and high-deductible health plans (HDHPs). The solution is cloud-based, requires no hardware installation (SaaS), and provides tools to help clients meet IRS 501r and ACA audit compliance standards. It is designed to support a wide range of healthcare organizations, from independent practices to large hospital systems.
