---

## Overview

---

CureMD Psychiatry EHR is a purpose-built, all-in-one platform designed for psychiatrists, psychologists, therapists, and behavioral health practices to streamline clinical, administrative, and financial operations. The system is crafted to assist in documenting mental and behavioral issues effectively for both adults and children, supporting comprehensive notetaking and detailed patient histories.

## Key Features and Capabilities

The software consolidates essential functions into one intuitive system, enhancing practice efficiency by streamlining documentation, facilitating secure communication, and simplifying medication management.

**AI-Powered EHR Scribe:** Automatically documents patient encounters in real-time using advanced speech recognition and natural language processing, reducing administrative burden.

**Integrated Telehealth:** Offers remote video consultation capabilities for flexible care delivery, which is ideal for patients who prefer privacy or remote access.

**Electronic Prescribing of Controlled Substances (EPCS):** Supports secure and compliant electronic prescribing of controlled psychotropic medications.

**Customizable Workflows:** Highly customizable clinical templates, workflow settings, and encounter notes tailored to the specific needs of a psychiatry practice.

**Behavioral Health Tools:** Includes built-in behavioral health assessments, psychotherapy note templates, multi-disciplinary treatment plans, compliance tracking, and crisis intervention workflow tools.

**All-in-One Platform:** Integrates Electronic Health Records (EHR), Practice Management (PM), and optional Revenue Cycle Management (RCM) / Medical Billing Services.

**Mobile Access:** EHR for iOS and Android devices allows for convenient patient care and record access on-the-go.

## Target Users and Technology

CureMD is suitable for practices of all sizes and is a cloud-based (SaaS) solution. It supports interoperability using industry standards like HL7 and FHIR, providing an API for third-party integrations.

## Benefits

Users often cite the ease of use, flexible scheduling, and workflow efficiency as major advantages. The integrated system is designed to improve collections, reduce revenue loss, and ensure seamless communication across the medical office.

## Key Features

---

- AI-Powered EHR Scribe
- Electronic Prescribing of Controlled Substances (EPCS)
- Integrated Telehealth/Video Consultations
- Customizable Psychiatry Templates & Workflows
- Patient Portal & Engagement Tools
- Integrated Practice Management & Billing
- Built-In Behavioral Health Assessments
- Crisis Intervention Workflow Tools

## Pricing

---

**Model:** subscription

Pricing is customized based on practice size, type, and requirements. It is generally subscription-based per provider per month, with optional Revenue Cycle Management (RCM) billing services available for a percentage of collections (e.g., 4-5%). Request a personalized quote.

**Target Company Size:** small, medium, enterprise

## Integrations

---
