Overview

CureMD is a prominent healthcare technology company that offers an all-in-one cloud-based platform encompassing Electronic Health Records (EHR), Practice Management (PM), and Revenue Cycle Management (RCM) services. Established in 1997, the software is designed to transform the administrative and clinical operations of healthcare organizations, from solo practitioners to large multi-specialty practices and hospitals.

The EHR system is custom-tailored for over 35 specialties, featuring specialty-rich content, customizable templates, and a workflow editor. A key modern feature is the integrated AI Medical Scribe, which uses advanced generative AI to automatically record patient visits, generate structured SOAP notes, and insert them directly into the patient chart, complete with relevant ICD, CPT, and RxNorm codes. This aims to reduce documentation time and administrative burden.

The Practice Management component includes enterprise scheduling, KPI dashboards, appointment reminders, and electronic eligibility verification. The Medical Billing Service (RCM) offers full-service billing, including claims management, denial management, and performance reporting, often on a percentage-of-collections model. The platform is designed for interoperability, allowing connection with labs, pharmacies, hospitals, and other providers, and includes a secure Patient Portal for patient engagement, appointment requests, and viewing records. It is a mobile-optimized solution with dedicated apps for iOS and Android devices, ensuring anytime, anywhere information availability and touch-based navigation for faster documentation.

CureMD is HIPAA compliant and ONC 2015 certified, supporting regulatory requirements like Meaningful Use and ICD-10.
