

edgeMED Healthcare

A unified platform for Revenue Cycle Management (RCM) and intelligent technology, offering practice management, EHR, and e-prescribing solutions for healthcare organizations.

<https://example.com/1762583716455>

Overview

edgeMED Healthcare provides a unified platform of expert revenue cycle management (RCM) services and intelligent technology solutions designed to help medical organizations of all sizes and specialties improve clinical, financial, and operational outcomes. The company has been in operation since 1981, evolving into a premier provider of revenue cycle and technology services nationwide.

Core Capabilities and Features

The platform and associated services are designed for healthcare providers, including hospitals, clinics, and individual practices, to streamline administrative and billing tasks. Key features and capabilities include:

Revenue Cycle Management (RCM): Full-service medical billing and collection, claims management, remittance advice, and denial management to maximize reimbursement and enhance collections.

Practice Management (PM): Tools for managing profitability, scheduling appointments, and improving overall practice efficiency.

Electronic Health Records (EHR) & E-Prescribing: Functionality for managing patient records and securely transmitting prescriptions.

Patient Engagement: Features for patient eligibility checks, patient portals, and telehealth capabilities.

Compliance Tracking: Built-in features to help medical practitioners meet and handle compliance requirements.

Provider Credentialing: Services to manage the credentialing process for providers.

Target Users and Deployment

edgeMED Healthcare is suited for healthcare organizations of various sizes, from small and medium-sized practices to large enterprises. The core Practice Management software is available as both a cloud-based and on-premise solution, supporting flexibility in deployment. The software is accessible via web browsers, as well as dedicated applications or mobile browser access on various devices.

Key Features

- Revenue Cycle Management (RCM)
- Claims Management
- Practice Management
- Electronic Health Records (EHR)
- E-Prescribing
