ENTER

AI-first Revenue Cycle Management (RCM) platform that automates medical billing, claim scrubbing, payment posting, and denial management for healthcare providers.

https://www.enter.health

Overview

ENTER is an AI-first Revenue Cycle Management (RCM) platform designed to help healthcare providers reduce claim denials, eliminate administrative burdens, and get paid faster with unprecedented transparency. The platform replaces traditional billing modules and is EHR-agnostic, offering custom integration with nearly every major EMR, including eClinicalWorks and Allscripts. The core of the platform is built around proprietary AI modules:

ClaimAI: Builds and scrubs claims using payer-specific logic, proprietary scrubbers, and real-time eligibility checks to achieve a high clean claim rate.

PaymentAI: Automatically posts and reconciles payments 24/7, instantly converting EOBs to ERAs and comparing payments against contract values to identify underpayments.

DenialAI: Leverages predictive analytics to spot issues before they trigger denials, and programmatically generates compliant appeals and reconsiderations with supporting documentation.

ContractAI: Stores, manages, and analyzes every payer contract's fee schedule, supporting all contract types (fee for service, value-based care, etc.).

The solution is delivered as a cloud-based dashboard with a massive, state-of-the-art business intelligence platform for real-time reporting and self-service analytics. It is targeted at healthcare providers, from startups to large enterprises, including digital health providers and ambulatory practices. Implementation is rapid, typically taking 2-8 weeks.

Key Features

- AI-powered Claim Scrubbing (ClaimAI)

- Automated Payment Posting & Reconciliation (PaymentAI)

- AI Denial Management & Appeals (DenialAI)

- Payer Contract Management & Analysis (ContractAI)

- EHR Agnostic Integration (Custom EHR Connect)

- Real-time Business Intelligence Dashboard

- Automated Patient Collections (SMS/Email)

- Single Sign-On (SSO) and 2FA

Pricing

Model: enterprise

Custom, negotiated pricing based on a Monthly Platform Fee (covering implementation, integration, etc.), a Collection Fee (percentage of reimbursement), and Passthrough Fees based on usage. Plans include Small, Large, and Enterprise tiers with features like SSO and advanced BI in higher tiers. An alternative model of a fixed per-claim cost ($2-6 per claim) has also been cited.

Target Company Size: startup, small, medium, enterprise

Integrations

eClinicalWorks, Allscripts, Veradigm EHR, Any EHR via custom API integration

Compliance & Certifications

HIPAA, SOC2
