Overview

Equicare Health's flagship product, EQUICARE CS™ (ECS), is a web-based, comprehensive platform for care coordination, primarily focused on the radiation and medical oncology sector. The solution is designed to support patients throughout the care continuum, from screening to survivorship. ECS aims to improve clinical outcomes, streamline operations, and optimize revenue generation for cancer centers and medical facilities.

Key Capabilities:

Patient Navigation: Tools for patient triage, managing barriers to care, and navigation for supportive services.

Survivorship Care Planning: Enables the creation of customized, follow-up plans, including treatment summaries, education, and future appointment recommendations, which is critical for meeting accreditation standards.

Patient Engagement: Features the Advanced Patient Portal (APP), a secure, web-based portal for patients to communicate with their care team, review test results, access customized education, and receive automated appointment reminders.

Clinical Management: Includes functionality for Symptom Assessment & Patient Reported Outcomes (PROMS), Tumor Board management, Referral Management, and Clinical Trial Management.

Accreditation & Compliance: Provides tools and a centralized repository to manage and monitor compliance for functional programs like Commission on Cancer (CoC), NAPBC, NAPRC, MIPS, OCM, QOPI, and ACR.

Revenue Optimization (NAV+): A product offering that supports automated PIN and PCM (Principal Care Management) billing to generate new revenue from existing navigation programs.

ECS is a multi-facility tool that is highly interoperable, offering deep, direct integration with major Oncology Information Systems (OIS) and Electronic Health Records (EHRs) via HL7 and other interfaces.

Key Features

- Patient Navigation

- Survivorship Care Planning

- Patient Reported Outcomes (PROMS)

- Clinical Trial Management

- Tumor Board Management

- Accreditation & Compliance Management

- Advanced Patient Portal

- Revenue Optimization (PIN/PCM Billing)

Pricing

Model: enterprise

Pricing is not publicly disclosed. The software can be licensed either with a one-time initial software license fee (plus implementation/hosting costs) or on a Software As A Service (SaaS) basis, invoiced quarterly based on the number of patients activated in the system. There is no cost associated with the number of users.

Target Company Size: medium, enterprise

Integrations

Varian ARIA OIS, Elekta MOSAIQ OIS, EPIC, HL7 Integration, DataMotion Direct HISP

Compliance & Certifications

CoC Accreditation, NAPBC, NAPRC, MIPS, OCM, QOPI, ACR
