---

## Overview

---

Getinge Cardiohelp VR Training is a specialized Virtual Reality simulation designed to train healthcare professionals on the complex procedures associated with the Getinge Cardiohelp® Extracorporeal Membrane Oxygenation (ECMO) device. The training is delivered through a VR headset and controllers, immersing the trainee in a digital environment with a fully responsive virtual Cardiohelp system.

This training is a resource-efficient, location-independent, and contact-free alternative to traditional instructor-led training, allowing for unlimited repetition of critical procedures. It utilizes a multi-layered didactic program guided by a digital coach, offering step-by-step instructions for beginners and advanced, unsupported scenarios for experts.

### Key Benefits:

**Enhanced Learning:** Studies indicate the VR training leads to significantly better long-term knowledge gain compared to traditional methods like video seminars.

**Safe Practice:** Provides a safe space to learn and practice complex, high-risk procedures like the ECMO priming procedure and configuration.

**Accessibility:** Being independent of location and person-to-person contact, it is ideal for smaller hospitals or during periods requiring social distancing.

### Target Users & Use Cases:

**Target Users:** Highly trained healthcare personnel, multidisciplinary teams caring for ECMO patients, critical care specialists, and medical students.

**Use Cases:** Initial and recurrent training for ECMO device operation, including the priming procedure and configuring program options, especially in intensive care and emergency medicine settings.

## Key Features

---

- Virtual Reality Immersion
- Digital Coach Guidance
- Automated Feedback
- ECMO Priming Procedure Training
- Device Configuration Training
- Beginner and Expert Training Modules
- Unlimited Repetition of Scenarios

## Pricing

---

**Model:** enterprise

Pricing is not publicly disclosed and is typically handled through an enterprise license or included as part of a comprehensive training and education package for the Cardiohelp System.

**Target Company Size:** medium, enterprise
