

HealthSnap

Integrated Virtual Care Management (VCM) platform for Remote Patient Monitoring (RPM) and Chronic Care Management (CCM) to improve chronic disease outcomes and diversify revenue.

<https://welcome.healthsnap.io/>

Overview

HealthSnap is an integrated Virtual Care Management (VCM) platform designed for healthcare organizations, including provider groups and large health systems, to manage chronic conditions remotely. The platform unifies Remote Patient Monitoring (RPM), Chronic Care Management (CCM), and Principal Care Management (PCM) into a single solution, serving as an 'Operating System for Virtual Chronic Disease Management.'

Key Benefits and Capabilities:

Proactive Care Delivery: It facilitates the shift from reactive, episodic care to proactive and continuous care by providing real-time data transmissions, routed patient-specific clinical alerts, and AI-guided care coordination.

Revenue Generation: HealthSnap helps organizations diversify revenue streams by simplifying the complex process of billing for RPM and CCM CPT codes through its patented Eligibility Report and billing automation tools.

Interoperability: The platform is designed to minimize disruptions to existing workflows by integrating seamlessly with over 80 Electronic Health Record (EHR) systems, including Epic, Cerner, and Allscripts.

Full-Service Option: For providers lacking in-house capabilities, HealthSnap offers co-sourced, dedicated clinical staff and care management services licensed in the provider's state to easily start and scale virtual care programs.

Patient Experience: Patients receive pre-configured, cellular-enabled health devices (e.g., blood pressure monitors, glucose meters) that are easy to deploy and use, along with a dedicated patient mobile app for sharing data and communicating with their care team.

HealthSnap is proven to drive significant clinical outcomes, such as a 23.8 mmHg reduction in systolic blood pressure for hypertensive patients and a 16.5 mg/dL reduction in fasting blood glucose for diabetic patients. It is trusted by over 180 health systems and provider organizations, remotely monitoring and managing over 100,000 patients.

Key Features

- Remote Patient Monitoring (RPM)
- Chronic Care Management (CCM) & Principal Care Management (PCM)
- Automated RPM/CCM Billing & Eligibility Report (Patented)
- EHR Integration (80+ systems)
- AI-guided Care Coordination & Risk Triaging
- Population Health Analytics
- Pre-configured Cellular Health Devices & Logistics
- Co-sourced Clinical Staffing/Care Management Services

Pricing

Model: enterprise

Pricing is not publicly disclosed and is based on the healthcare organization's size, program scope, and required services (RPM, CCM, PCM, co-sourced staffing). A demo is required for a customized quote.

Target Company Size: medium, enterprise

Integrations

EHR Systems (80+), Epic EHR, Cerner EHR, Allscripts EHR, Apple Health, Google Fit

Compliance & Certifications

HIPAA, HITRUST
