

Imaging Insights

An analytics and coaching solution for radiology management, built on GE Healthcare's Applied Intelligence platform, providing actionable insights to optimize operational efficiency, clinical excellence, and growth.

<https://example.com/1762583716454>

Overview

Imaging Insights by GE HealthCare is an advanced analytics and coaching solution designed to help radiology management teams achieve value-based imaging transformation objectives. It addresses common challenges in radiology departments, such as a lack of data visibility, scheduling inconsistencies leading to backlog, and sub-optimum asset utilization.

Built on GE Healthcare's Applied Intelligence (or Edison) platform, the solution merges data from multiple sources, including various imaging modalities (multi-vendor/multi-modality, initially commercially available for MR and CT systems) and the Radiology Information System (RIS), to create a single, consolidated view of the entire imaging operation.

Key Benefits and Capabilities

1. Operational Efficiency: The platform provides automated, actionable insights to help optimize exam duration and procedure scheduling, which increases throughput and reduces backlog. It also identifies variations in practices and staff performance to highlight training opportunities and drive productivity.

2. Clinical Excellence: Imaging Insights helps identify and standardize variations in clinical protocols for consistency of care across the enterprise. It also enables practice-level dose management to meet regulatory and compliance guidelines by identifying variations in dose levels.

3. Growth Management: The tool assists in improving financial growth by providing visibility into referral management and examination mix. It allows teams to benchmark trends for asset mix and utilization by hour/day/week, supporting equipment optimization and data-driven capital planning.

Customer Success Engagement: The software includes a dedicated Customer Success Engagement program with a Customer Success Manager to assist with adoption, define vision and KPIs, and recommend actions to ensure customers realize the full value of the application.

Key Features

- Operational Efficiency Optimization (Scheduling, Throughput)
- Clinical Protocol Standardization and Optimization
- Practice-level Dose Management and Compliance
- Staff Performance and Training Needs Identification
- Equipment Utilization and Asset Mix Benchmarking
- Referral Management and Examination Mix Analysis
- Multi-vendor/Multi-modality Data Merging
- Dedicated Customer Success Engagement and Coaching

Pricing

Model: enterprise

Pricing is not publicly disclosed. Contact GE HealthCare for a custom quote and details on the Customer Success Engagement program, which is included with the solution.

Target Company Size: enterprise

Integrations

Radiology Information System (RIS), Imaging Modalities (MR, CT, X-Ray, US), DoseWatch™, Imaging Protocol Manager

Compliance & Certifications

HIPAA, GDPR
