

Keragon

The HIPAA-compliant, no-code automation platform for healthcare, connecting 300+ EHRs and business tools to build secure workflows.

<https://www.keragon.com>

Overview

Keragon is an AI-powered, no-code, HIPAA-compliant workflow automation platform designed specifically for the healthcare industry. It helps healthcare organizations, from solo practices to enterprise healthcare systems and digital health companies, connect their disparate software solutions (EHRs, CRMs, billing, communication tools) to build secure, scalable automations without writing custom code.

The platform features an intuitive visual workflow editor and integrates with over 300 healthcare and business applications, including leading EHRs like Athenahealth, Elation, and ModMed, as well as popular tools like Salesforce, Slack, and Twilio.

Keragon is positioned as a regulatory compliant alternative to general automation tools like Zapier or Make.com, offering out-of-the-box HIPAA and SOC2 Type II compliance, including a Business Associate Agreement (BAA) on all paid plans.

Key capabilities include automating patient intake, appointment scheduling, billing, data syncing/unification across systems, and patient communication. The platform also includes AI co-pilots for workflow design and troubleshooting. All plans support unlimited users, with pricing based on usage (workflow runs and active workflows).

Key Features

- No-Code Visual Workflow Editor
- 300+ Healthcare & Business Integrations
- AI Co-pilot for Workflow Design & Debugging

- HIPAA & SOC2 Type II Compliance (with BAA)
- Unlimited Users on all Plans
