

Med e-care Billing

Comprehensive, MIS-compatible billing and trust management software for senior living, long-term care, and retirement facilities.

<https://mede-care.com>

Overview

Med e-care Billing & Trust Management is a core module of the integrated Med e-care software suite, designed specifically for senior living, long-term care, retirement, and rehabilitation facilities. The software is a comprehensive, highly flexible, and MIS-compatible solution that accounts for multiple programs of care within a single facility or a network of communities.

The system is engineered to address inefficient billing processes and inaccurate admissions documentation to significantly improve revenue cycle management. Key financial features include accounts receivables, billing, PAPP (Pre-Authorized Payment Plan), and trust management solutions with a built-in automated payment method. The platform provides time-saving wizards for complex financial processes, service-based setup for customization, automatic calculations, pre-set price/rate changes, batch entry, and comprehensive real-time reporting with financial alerts.

Crucially, financial data flows seamlessly from clinical modules, such as eAssessment and eMAR, ensuring accurate invoicing for all services provided. The integrated trust management tools allow communities to efficiently manage resident banking, including deposits, withdrawals, maintenance charges, interest allocation, and group billing. The software is part of an all-in-one platform that links an organization's clinical, medication, financial, and business processes, supporting progressive improvements and increased operational effectiveness.

Key Features

- Accounts Receivables Management
- Trust Management (Resident Banking/Deposits/Withdrawals)
- Automated Payment Processing (PAPP)

- Real-time Financial Reporting and Analytics
- General Ledger (Accounting Software) Export/Integration
- Service-based Customization and Automatic Calculations
- Batch Entry and Group Billing
- Seamless Clinical Data Flow to Billing
