

MedicsRIS

An AI-based Radiology Information System (RIS) from Advanced Data Systems (ADS) designed to optimize revenue, efficiency, and workflow for imaging practices of any size.

<https://example.com/1762583716454>

Overview

MedicsRIS is a comprehensive, AI-powered Radiology Information System (RIS) developed by Advanced Data Systems (ADS) to streamline the business, financial, and clinical operations of diagnostic and interventional radiology practices, groups, and networks.

Key Capabilities and Workflow

The platform is built to boost productivity and maximize revenue for imaging centers. Key features include an Advanced Radiology Scheduler for multi-modality scheduling, insurance eligibility verification, and automated prior authorizations to protect revenue in advance. Its integrated billing system boasts a high first-pass success rate for claims.

For connectivity, MedicsRIS is compatible with virtually any EHR and PACS. It utilizes EMRDirect and ImageDirect to securely transmit finalized reports and embedded image links back to referring physicians' EMRs without requiring expensive HL7 interfaces.

Patient and Physician Engagement

The system includes the **MedicsPortal** for patients, enabling them to request appointments, complete forms online, and make online payments 24/7, significantly reducing staff workload. A dedicated **Referring Physician Portal** allows referrers to request appointments and view PACS images and reports.

Specialty and Compliance

MedicsRIS offers specialty features like Mammography Tracking to record BIRADS findings and biopsy results for statistical reporting. The platform also assists practices in complying with CMS initiatives, including the No-Surprises Act and MIPS reporting, as well as the Cures Act.

Key Features

- AI-Powered Workflow Optimization

- Multi-Modality Advanced Scheduling
- Automated Prior Authorizations & Eligibility Verification
- Patient & Referring Physician Portals (MedicsPortal)
- EMRDirect/ImageDirect Report & Image Link Transmission
- Radiology-Specific Billing & RCM
- Mammography Tracking (BIRADS, Biopsy Results)
- Open PACS Integration

Pricing

Model: subscription

Contact ADS for a custom quote. Pricing is typically based on features, modules, deployment (cloud/on-premise), and the size of the practice or network.

Target Company Size: small, medium, enterprise

Integrations

PACS (Picture Archiving and Communication System), EHR/EMR (Virtually any), HIS (Hospital Information System), Proton PACS, Microsoft Excel

Compliance & Certifications

HIPAA, Cures Act
