

MediQuant

Enterprise active archiving platform for healthcare, enabling the secure retirement of legacy EMR, ERP, and Patient Accounting systems.

<https://healthedge.com>

Overview

MediQuant's flagship product, DataArk®, is the leading enterprise active archive platform for hospitals and health systems. It provides a secure, centralized, and scalable repository for data from an unlimited number of disparate legacy systems, including clinical, patient accounting, and ERP platforms. The solution allows organizations to confidently decommission outdated systems, achieving significant cost savings—up to 80%—by eliminating licensing, maintenance, and support fees.

DataArk facilitates a "one patient, one record" experience by consolidating discrete and non-discrete data into a single, user-friendly interface. Its core value proposition is maintaining seamless, contextual, and secure access to historical patient data directly from the new Electronic Health Record (EHR) or Electronic Medical Record (EMR) system. This is accomplished through the **Auto-Invoke** feature, a Single Sign-On (SSO) integration that launches the archived patient record at the point of care.

Key capabilities include:

Data Migration & Conversion: Expertise in complex, multi-system data extraction, conversion, and migration for major platforms like Epic, Cerner, and MEDITECH.

Revenue Cycle Management: Active archiving supports Accounts Receivable (AR) wind-down and collections activity, allowing financial systems to be retired sooner.

Compliance & Security: The platform is built with rigorous security practices, including HITRUST r2 Certification and HIPAA Audit Tracking, ensuring the long-term integrity and compliant access of the legal medical record.

Target users include IT leaders, HIM staff (for Release of Information requests), Revenue Cycle teams, and clinicians who require immediate access to a patient's complete historical narrative.

Key Features

- Enterprise Active Archiving (DataArk)
- Legacy System Decommissioning
- Single Sign-On (SSO) Auto-Invoke

- Discrete & Non-Discrete Data Storage
- Patient Accounting/AR Wind-Down
- HIPAA Audit Tracking & Reporting
- EMR/EHR Integration

Pricing

Model: enterprise

Enterprise pricing is determined based on the complexity of the data migration, the number of legacy systems being retired, and the total volume of data. Customers report achieving up to 80% cost reduction by eliminating legacy system maintenance and licensing fees. No public starting price is available.

Target Company Size: medium, enterprise

Integrations

Epic, Cerner, MEDITECH, HealthEdge Source

Compliance & Certifications

HIPAA, HITRUST r2 Certified, SOC 2 Type II Tier 3, CURES Act Compliance
