Medisoft

Integrated medical billing and practice management software designed to streamline administrative tasks and improve cash flow for small to mid-sized healthcare practices.

Overview

Medisoft is a comprehensive and scalable medical billing and practice management solution, often associated with CGM (CompuGroup Medical) and trusted by thousands of independent practices across the U.S. It is designed to simplify billing, scheduling, and revenue cycle management (RCM) for small to mid-sized medical offices. Key capabilities include appointment scheduling (with features like drag-and-drop, color-coded calendars, and online scheduling), patient accounting, electronic claims submission, insurance claim management, payment posting (including ERA posting), and advanced reporting/analytics.

The software offers flexible deployment options, including on-premise perpetual licenses and cloud-based subscriptions. The cloud version provides cross-device access and a mobile app (Medisoft Mobile/Patient Kiosk) for on-the-go access and patient check-ins. The latest versions (e.g., v30) introduce features like integrated CGM PAY for credit card/ACH payments, enhanced patient responsibility estimates, and improved write-off tools to better manage the revenue cycle.

Medisoft is known for its affordability and ease of use, providing an all-in-one administrative solution for practices looking to manage their entire revenue cycle efficiently.
