---

## Overview

---

Navista, a Cardinal Health company, is a clinician-designed oncology practice alliance that offers an advanced suite of technology solutions and support services to help community oncology and urology practices remain independent and thrive in a value-based care environment. The Navista™ technology suite, including Navista™ Practice Intelligence and Navista™ Tech Solutions (TS), is designed to reduce administrative burden, optimize clinical operations, and drive meaningful insights.

### Key Components & Capabilities:

**Navista™ Practice Intelligence:** A centralized data insights and analytics platform that aggregates disparate data sets to provide actionable clinical, financial, and operational insights for informed decision-making.

**AI-Enabled Medical Scribe:** A service that leverages artificial intelligence to streamline medical documentation for clinicians, aiming to save several hours per day per physician.

**Clinical Workflow & Pathway Tools (Decision Path):** Embedded directly into the EHR workflow, this tool provides accurate cost-to-patient regimen estimates and comparisons at the point of care, ensuring compliance with National Comprehensive Cancer Network® (NCCN®) Guidelines.

**Episode Analytics:** A data-driven cost tracking tool that enables oncologists and administrators to accurately measure the cost of care at the start and during an episode of care, supporting value-based care performance.

**Integrated EHR/PMS:** The suite integrates with and often includes a comprehensive platform like CureMD Oncology Cloud, which provides electronic health records (EHR), a practice management system (PMS), revenue cycle management (RCM), a patient portal, and telehealth solutions.

**Population Health Support (CORE™ by Jvion):** AI-enabled decision support to proactively identify high-risk patients for adverse events, surfacing interventions to avoid costly ER and hospital visits.

**Clinical Trials Matching (VIPER™ by Deep Lens):** An AI-powered solution that identifies and matches cancer patients to clinical trials, including precision medicine studies, more efficiently.

Navista's core value proposition is to provide independent practices with enterprise-level technology and resources to navigate complex systems, manage costs, and focus on patient-centered cancer care. The alliance model offers flexible commitment terms and affordable rates to its members.

## Key Features

---

- AI-Enabled Medical Scribing
- Oncology-Specific EHR/PMS Integration
- Value-Based Care Episode Analytics
- Clinical Decision Support (Pathways)
- AI-Powered Clinical Trials Matching
- Revenue Cycle Management (RCM) Services
- Centralized Practice Intelligence & Analytics
- Population Health Risk Identification

## Pricing

---

**Model:** subscription

Offered through an alliance membership model with flexible commitment terms and access to services at affordable rates. Pricing is not publicly disclosed and is likely customized per practice.

**Target Company Size:** small, medium

## Integrations

---

CureMD Oncology Cloud (EHR/PMS/RCM), Jvion (CORE™ Population Health), Deep Lens (VIPER™ Clinical Trials Matching), Existing EHR/Practice Management Software

## Compliance & Certifications

---

HIPAA
