# OncoEMR

Oncology-specific Electronic Health Record (EHR) by Flatiron Health with embedded clinical content, mobile access, and integrated research tools.

https://example.com/1762583716455

## Overview

OncoEMR is a specialized, cloud-based Electronic Health Record (EHR) system developed by Flatiron Health, designed exclusively for oncology practices and cancer centers. The software's core value proposition is to help care teams spend less time on administrative tasks and more time with patients by providing intuitive, oncology-specific workflows and accessible data.

**Key Benefits and Capabilities:**

**Oncology-Specific Workflows:** The system is purpose-built for the complex needs of cancer care, addressing dosage management, chemotherapy administration, and tumor staging with features like customizable templates and specialized charting tools.

**Embedded Clinical Content:** OncoEMR integrates authoritative clinical resources directly into the point of care. This includes over 3,000 NCCN Order Templates®, AJCC staging content, and First Databank drug information and patient education resources, enabling evidence-based decision support.

**Value-Based Care Support:** The platform includes tools and custom dashboards (via Flatiron Insight™) to easily navigate and report on value-based care requirements, such as MIPS and the Oncology Care Model (OCM).

**Mobile Access:** The **OncoAir® mobile app** allows clinicians to securely access key patient information, review lab results, upload notes, and manage patient charts while on call or during hospital rounds, ensuring high-quality care on the go.

**Patient Engagement:** The **CareSpace patient portal** provides a seamless, user-friendly experience for patients to access their health information, pay bills, and communicate with their care team, reducing administrative burden on staff.

**Research Integration:** OncoEMR seamlessly integrates with clinical research tools like OncoTrials® to help practices identify and match patients with appropriate clinical trials, bridging the gap between care and research.

**Financial & Operational Health:** Integrated analytics via Flatiron Insight™ allow practices to monitor financial and operational health metrics, including drug usage, patient visit volumes, and inbound referrals.

OncoEMR is a dominant solution in the oncology EMR space, catering to the unique, data-intensive demands of the specialty. It is a cloud-based, SaaS solution that supports practices of all sizes from small community groups to large health systems.

## Key Features

- Oncology-Specific Workflows & Templates

- Embedded Clinical Content (NCCN, AJCC)

- OncoAir® Mobile App

- CareSpace Patient Portal

- Flatiron Insight™ Reporting & Analytics

- Integrated Research Tools (OncoTrials®)

- Certified Electronic Prescribing (e-Rx)

- Value-Based Care Reporting (MIPS, OCM)

## Pricing

**Model:** subscription

Custom pricing based on practice size and specific requirements. Requires a one-time implementation fee plus annual subscription fees. Additional fees may apply for advanced integrations (HL7 interfaces, FHIR APIs) and third-party services (e.g., e-prescribing vendors).

**Target Company Size:** small, medium, enterprise

## Integrations

Flatiron Assist™ (Clinical Decision Support), Caris Life Sciences® (Molecular Profiling), Foundation Medicine (Molecular Profiling), State Prescription Drug Monitoring Program (PDMP), DeepScribe (AI Ambient Scribe), Practice Management Systems (via API/Interface)

## Compliance & Certifications

ONC Certified, HIPAA, GDPR, HITRUST CSF, SOC 2 Type 2
