

Planisware

A comprehensive Enterprise Project Portfolio Management (PPM) solution for strategic planning, resource optimization, and product development across complex organizations.

<https://planisware.com/>

Overview

Planisware is a global provider of Enterprise Project Portfolio Management (PPM) software, primarily offering two applications: Planisware Enterprise and Planisware Orchestra, which are part of its Business Innovation Cloud. The software is designed for organizations with medium to highly sophisticated project operations, including those in pharmaceutical, life sciences, medical devices, IT, engineering, and automotive sectors.

Planisware provides an integrated solution that brings together budgets, forecasts, schedules, resources, and actuals into a single platform, enabling a cohesive decision-making process. The platform's functional scope covers Strategic Portfolio Management, Project Portfolio Management, Innovation Management/New Product Development (NPD), and Adaptive Project Management.

Key Features and Capabilities:

Resource Management: Robust features for capacity planning, resource scheduling, allocation, and utilization tracking to prevent overallocation.

Financial Management: Tools for budgeting, forecasting, cost-to-completion tracking, and real-time cost control.

Portfolio Optimization: Predicts investment scenarios through simulations and scenario planning (what-if analysis) to prioritize projects based on strategic alignment and resource availability.

AI & Analytics: Features include AI-powered predictive algorithms for forecasting costs and outcomes, and Digital Agents for personalized guidance and task automation.

Project Execution: Supports various methodologies including Agile, and provides interactive Gantt charts, Kanban boards, and workflow automation.

Planisware is an enterprise-strength solution trusted by global organizations, offering extensive customization to align with unique business processes.

Key Features

- Project Portfolio Management (PPM)
- Resource Management & Optimization
- Financial Management & Forecasting
- Scenario Planning & Optimization
- New Product Development (NPD) & Innovation Management
- Real-Time Reporting and Analytics
- AI-Powered Predictive Analytics & Digital Agents
