

Process Street

A Compliance Operations Platform that turns policies into automated, AI-enforced, and audit-ready workflows.

<https://www.process.st/>

Overview

Process Street is a powerful, no-code Compliance Operations Platform designed to help organizations document, manage, and automate their critical recurring processes and standard operating procedures (SOPs). The platform is built to ensure operational consistency, efficiency, and accountability, making it particularly valuable for compliance-heavy industries like healthcare and finance. It replaces manual oversight and clunky, fragmented systems with a centralized hub for policies and live, trackable workflows.

Key features include a no-code workflow builder with conditional logic, dynamic due dates, and approval flows. The platform's AI compliance agent, 'Cora,' monitors workflows in real-time, flags potential risks, and enforces process standards to ensure every step is followed. This focus on enforcement and audit-ready proof helps teams maintain compliance with frameworks like HIPAA, SOC 2, and ISO 27001. Process Street is used across various teams (Operations, HR, Compliance, IT) and is trusted by over 650,000 users for tasks ranging from employee onboarding and client management to quality control and regulatory compliance.
