---

## Overview

---

ProtectAdvisr™ by Jensen Hughes is a powerful, web-based emergency management and life safety software solution designed for the world's most regulated industries, including healthcare, industrial, and government organizations. It is part of the broader Jensen Hughes Advisr™ suite of digital risk management tools.

The software's core value proposition is to provide real-time situational awareness at the facility and departmental levels, enhancing collaboration, improving safety, and strengthening resiliency. It helps organizations streamline workflows, analyze complex safety data, and stay compliant with changing codes and regulations, such as NFPA and AHJ Code References.

### Key Features and Capabilities:

ProtectAdvisr includes a suite of tailored applications to manage critical risk areas:

**Emergency Management:** Provides a virtual command center accessible 24/7, enabling real-time management of emergencies across multiple facilities and supporting social distancing of team members. It acts as a single source platform for healthcare reporting and includes a document repository.

**Life Safety & Compliance:** Offers Life Safety Assessments, Door Inspections, and Fire Risk Assessments. It provides clear guidelines and exact code references to help businesses achieve and maintain compliance with fire and life safety regulations.

**ITM (Inspection, Testing, and Maintenance) Tracking:** A web-based application that streamlines the scheduling, tracking, and documentation of ITM activities, ensuring a complete record from failure identification to corrective actions. It also includes Vendor Management to track service providers.

**Healthcare Coalitions:** Includes specific functionality for Healthcare Coalition support, as demonstrated by its deployment statewide in the State of Connecticut.

**Benefits and Target Users:**

ProtectAdvisr is purpose-built to reduce administrative burden by up to 50% and strengthen readiness and compliance. In healthcare settings, clients have seen a reduction in Life Safety Code findings by over 60% and achieved 80–90% deficiency closeout rates. The solution is scalable and supported by a team of subject matter experts who provide configuration, onboarding, and ongoing technical support anytime.

The application is web-based and built with a responsive design framework, allowing it to be accessed from any device (web, mobile) with login credentials, ensuring a consistent user experience.

## Key Features

---

- Real-time Situational Awareness
- Virtual Command Center (24/7 Access)
- Life Safety Assessments & Compliance Tracking
- Inspection, Testing, and Maintenance (ITM) Tracking
