PulseCheck

Comprehensive EMR/EDIS software clinically designed to streamline workflows, enhance patient care, and manage patient flow in Emergency Departments and Urgent Care facilities.

https://pulsechecked.com/

Overview

PulseCheck is a specialized Electronic Medical Record (EMR) and Emergency Department Information System (EDIS) solution designed by physicians to improve workflow and patient care in high-risk settings like hospital and freestanding Emergency Departments (EDs) and Urgent Care centers. The software has been operating since 1998 and is trusted by thousands of clinicians.

Key Benefits and Capabilities:

Workflow Optimization: The solution is designed for ease of use and efficiency, reducing administrative burden and allowing healthcare professionals to focus on patient care.
Patient Safety: Features like the Clinical Decision Support tool consolidate patient data to identify high-risk cases and potential drug interactions, enhancing decision-making and reducing medical errors.
Operational Excellence: The ED Operational Dashboards provide at-a-glance views of performance against key metrics, enabling quick identification of outliers and tracking of trends for improved resource management and quality of care measures.
Main Features:

Clinical documentation with customizable templates.
e-Prescribing, including EPCS (Electronic Prescribing of Controlled Substances) via a partnership with Dr. First and access to PDMPs (Prescription Drug Monitoring Programs).
Real-time, color-coded Patient Tracking Board to manage patient flow and reduce wait times.
Automated Notification System that alerts care teams to outstanding documentation requirements.
Digital Patient Access, including online scheduling, queuing, intake, and referral options (ER Express - Intake Solutions).
Scribe workflow support.

Revenue Cycle Management (RCM) and Practice Management (PM) capabilities for billing and financial performance.
PulseCheck is a web-based, mobile-capable solution that integrates seamlessly with existing hospital systems using standard HL7 messaging protocols.

Key Features

- Emergency Department EMR/EDIS

- Real-time Patient Tracking Board

- Clinical Decision Support (CDS)

- E-Prescribing (EPCS/PDMP)

- Automated Documentation Notifications

- Digital Patient Access (Online Scheduling/Intake)

- ED Operational Dashboards

- Scribe Workflow Support

Pricing

Model: enterprise

Pricing is not publicly disclosed and is available upon request. The vendor offers flexible, customized plans tailored to the specific requirements of hospitals and emergency departments. It is generally considered a higher-cost solution compared to some alternatives.

Target Company Size: medium, enterprise

Integrations

Existing Hospital Information Systems (via HL7), Dr. First (ePrescribing), SureScripts (ePrescribing history)
