

RXNT

Cloud-based, integrated healthcare software suite offering EHR, E-Prescribing, Practice Management, and Medical Billing for ambulatory practices.

<https://www.rxnt.com>

Overview

RXNT is a pioneering, Maryland-based provider of award-winning, cloud-based healthcare software, established in 1999. It offers a fully-integrated and interoperable suite of solutions including Electronic Health Records (EHR), E-Prescribing (eRx), Practice Management (PM), Medical Billing, Patient Scheduling, and a Patient Portal. The software is trusted by tens of thousands of professionals to streamline clinical and business operations and improve patient care. The full suite is designed to function as a single, connected platform, eliminating the need to juggle multiple disparate systems.

Key benefits include predictable, transparent pricing that incorporates free setup, training, data transfer, and ongoing U.S.-based support. The system is designed for quick and efficient implementation, with most solutions up and running within days or weeks, not months.

Main features and capabilities include: Electronic Health Records (EHR) with custom charting and reports, EPCS-certified Electronic Prescribing (eRx), Practice Management, Revenue Cycle Management (RCM), Medical Billing, Patient Scheduling, Patient Portal, Telehealth, and the AI-powered Ambient IQ ambient listening tool. The platform is accessible 24/7 via web and dedicated mobile apps for iOS and Android, allowing providers to manage their practice on the go.

RXNT is suitable for independent providers, small practices, and multi-specialty ambulatory healthcare organizations. The company has a strong market footprint, having processed over \$7 billion in claims and transmitted over 125 million prescriptions.
