

SNFQAPI

All-in-One QAPI solution for Skilled Nursing Facilities (SNFs) to manage regulatory compliance, generate CMS-2567s, and improve quality of care.

<https://www.snfqapi.com>

Overview

SNFQAPI is an All-in-One, ready-to-use Quality Assurance Performance Improvement (QAPI) solution built specifically to help Skilled Nursing Facilities (SNFs) comply with new QAPI regulations simply and efficiently. It is a web-based program that helps facilities maintain quality resident care, regulatory compliance, a high star rating, and a lower readmission rate.

Key Features and Capabilities

The system uses indicators to measure compliance with every regulation on an ongoing basis. When a deficiency is found, SNFQAPI automatically generates a written **CMS-2567 Plan of Correction (POC)** form, complete with FTag, Regulation, Scope & Severity, Findings, and Statement of Deficiencies. It also generates a written **QAPI Plan** and a **Facility Assessment**.

SNFQAPI is an ideal tool for **Mock Surveys** and **Medical Records Auditing**. It integrates with most EHR systems via **HL7 and/or MDS** for real-time resident data updates, minimal data entry, and advanced analytics on length of stay, readmissions, star ratings, and compliance.

Target Users and Use Cases

The primary target market is **Skilled Nursing Facilities (SNFs)** and their Administrators, Directors of Nursing, and QAPI Committee Members. Use cases center on achieving and maintaining regulatory compliance with CMS QAPI requirements, improving CMS 5-Star Ratings, reducing acute readmission rates, and litigation avoidance.

SNFQAPI is designed by Health Care Professionals for Health Care Professionals and claims its client facilities averaged fewer deficiencies than the national average and 98% proudly displayed 5 Stars on medicare.gov Nursing Home Compare in 2013, 2014, 2015, and 2016.

Key Features

- Automated CMS-2567 Plan of Correction (POC) Generation
- Written QAPI Plan and Facility Assessment Generation
- Real-time Regulatory Compliance Measurement (using indicators)
- Mock Survey and Medical Records Auditing Tool
- EHR Integration (HL7/MDS) for Real-time Data
- Advanced Analytics (Readmissions, Star Ratings, LOS)
- QAPI Committee and Member Management
- Litigation Avoidance Tools
