

Speech Tools

Award-winning suite of mobile apps for speech and language therapy, voice analysis, and vocal training for clinicians and patients.

<https://speechtools.co>

Overview

Speech Tools is a collection of award-winning mobile applications designed by Speech and Language Therapists (Pathologists) to help people improve their voice and communication. The software is primarily used by clinicians and their clients for both in-clinic and remote Telehealth/self-help purposes. The flagship product, **Voice Analyst**, is a professional voice pitch and volume monitor that provides real-time visual and acoustic feedback. It is trusted by SLPs, singers, and individuals with conditions like Parkinson's disease or those undergoing transgender voice therapy.

Key Apps in the Suite:

Voice Analyst: Real-time pitch and volume analysis, recording, vocal statistics (min/max/average), and target setting for therapy.

DAF PRO: Utilizes Delayed Auditory Feedback to help slow the rate of speech for people who stammer or have Parkinson's Disease.

Christella VoiceUp: Designed for voice feminization therapy.

Swallow Prompt: Provides reminders to swallow for individuals managing excess saliva.

1 Minute Voice WarmUp: Offers techniques and exercises to keep the voice healthy.

Key Benefits:

Accessibility & Affordability: The apps are available on mobile devices, making professional tools accessible and affordable to patients for home practice.

Accuracy: Voice Analyst features incredibly accurate vocal pitch detection algorithms, proven to be accurate to within 5 cents.

Telehealth Support: Users can record their voice and share the recordings and statistics with their clinician via email or cloud storage for remote therapy sessions.

Clinical Design: All apps are designed and tested by practicing Speech and Language Therapists and are used daily in over 170 countries.

The software is a one-time purchase per app and is explicitly non-subscription based.

Key Features

- Real-Time Voice Pitch & Volume Monitoring
