

SpeechFit

Free audio annotation and program tracking software for speech and language pathologists (SLPs) and their clients.

<https://speechfit.io>

Overview

SpeechFit is an all-in-one, user-friendly app designed to streamline the therapy experience for individuals with speech disorders, particularly stuttering, and the clinicians assisting them. The software is 100% free for clinicians (Speech-Language Pathologists or SLPs), offering a centralized platform to manage all clients and providing flexibility to meet diverse needs.

Key Features and Capabilities

SpeechFit is purpose-made for stuttering programs like Camperdown, Lidcombe, Westmead, and Oakville, and is highly customizable with a drag-and-drop interface. Core features include:

Annotated Audio Recording: Securely upload or record high-fidelity audio from any device and use a click-and-drag feature to pinpoint and annotate specific segments for collaborative analysis.

Live Sync for Telehealth: Real-time synchronization allows clinicians and clients to work on the same therapy cycle sheet or program updates instantly, making it perfect for remote sessions.

Program-Compliant Raters: Includes pre-configured, touch-optimized rating scales with instructions for Stuttering Severity, Fluency Technique, and SUDS (Subjective Units of Discomfort Scale), with options for customization.

Customizable Programs & Templates: Start from clinically-approved templates (Camperdown, Lidcombe, etc.) or from scratch, and adapt the program components using a drag-and-drop builder.

In-Depth Analytics: Provides rich, customizable charts and reports to track progress over time, including Reporting Frequency, Stuttering Severity, and Categories Chart.

Session Notes: Keep detailed session notes synced between the client and clinician, including homework and discussion topics.

Multimedia Integration: Easily incorporate written, video, and image exercises into the client's daily routine using a Markdown editor.

Target Users and Use Cases

SpeechFit is primarily targeted at **Speech-Language Pathologists (SLPs)** in private practice, small clinics, and mid-sized businesses, as well as their **clients** (adults, teens, and parents of children) who are undergoing speech therapy, especially for stuttering. The main use cases are program tracking, Telehealth collaboration, and data-driven progress monitoring.

Key Features

- Annotated Audio Recording
- Live Sync for Telehealth
- Customizable Program Templates
- Program-Compliant Rating Scales
- Client Management Dashboard
- In-Depth Progress Analytics
- Session Notes & Homework Sharing
- Multimedia Exercise Integration

Pricing

Model: freemium

Free for clinicians (SLPs). Clients have a free tier (e.g., 31 free entries per month) and pay a small monthly subscription fee for premium features like annotated audio and live recordings. Exact client pricing is not publicly disclosed.

Target Company Size: startup, small, medium
