T System

Clinical documentation software for high-acuity, episodic care settings like Emergency Departments and Urgent Cares that streamlines workflow and ensures regulatory compliance.

https://corrohealth.com/tsystem/

Overview

T System, a CorroHealth solution, is a specialized clinical documentation software designed for high-acuity, episodic care settings, including Emergency Departments (EDs), Urgent Care centers, and Physician Groups. The product suite, which includes T System EVolvED® and the T System SMART App™, is a web-based Software as a Service (SaaS) solution. Its core value proposition is the intuitive "circle and backslash" documentation method, which is so simple that 98% of clinicians reportedly fully adapt to it in a single shift, making it one of the most widely adopted episodic clinical documentation systems in the U.S..

The software is engineered to improve clinical, operational, and financial outcomes by providing simple, precise documentation and ensuring continuous regulatory compliance. Key capabilities include seamless integration with major EHRs like Epic, Oracle, and Cerner, leveraging FHIR® state-of-the-art capabilities for expanded interoperability. It features a Computerized Provider Order Entry (CPOE) system with drug and allergy checks, secure prescription sending (including controlled substances), and advanced reporting tools to manage multi-dimensional reports. The T System SMART App™ is specifically designed to embed clinical content and workflow directly within the Epic EHR, utilizing chief-complaint–driven templates and real-time feedback to guide documentation for accurate coding and full reimbursement.

Key Features

- Episodic Clinical Documentation (ED/Urgent Care)
- Intuitive "Circle and Backslash" Charting

- EHR/HIS Interoperability (FHIR® enabled)

- Continuous Regulatory Compliance & Updates

- Computerized Provider Order Entry (CPOE)

- Barcode Medication Administration (BMAD)

- Advanced Reporting & Analytics

- Revenue Cycle Management Support

Pricing

Model: enterprise

Pricing is available upon request and is customized for enterprise-level healthcare organizations (Hospitals, EDs, Urgent Cares). The system is noted for providing a rapid ROI, with one client achieving it in 6 months versus a projected 1 year.

Target Company Size: medium, enterprise

Integrations

Epic, Oracle, Cerner, Hospital Information Systems (HIS), Lab Information Systems (LIS), Radiology Information Systems (RIS), Billing Companies, Practice Management Systems
