

Tactus Therapy

Clinician-designed mobile apps for speech, language, and cognitive therapy for adults with aphasia and brain injury.

<https://tactustherapy.com>

Overview

Tactus Therapy offers a comprehensive suite of over 20 evidence-based mobile applications designed by a Speech-Language Pathologist (SLP) to help adults with acquired communication disorders such as aphasia, apraxia, and cognitive impairments following a stroke or brain injury. The apps are organized to address various skills including Oral Language, Written Language, Speech, Cognition, and Swallowing.

The core offering, such as the "Language Therapy 4-in-1" app, provides thousands of exercises across four key language modalities: speaking, listening, reading, and writing. A key value proposition is that the apps are flexible, user-friendly, and affordable (primarily a one-time purchase), allowing for intensive, evidence-based practice both in clinical settings and independently at home, often without requiring an internet connection.

Key Benefits & Capabilities:

Evidence-Based: Activities are based on researched treatment techniques like Semantic Feature Analysis (SFA), Phonological Component Analysis (PCA), and Verb Network Strengthening Treatment (V-NEST).

Customization: Users can fully customize activities by adding their own words, pictures, and prompts, making the therapy highly relevant to the individual's life (e.g., naming family members or pets).

Progress Tracking: The apps generate score reports that can be viewed on-screen or emailed to a clinician for easy data collection and progress monitoring.

Accessibility: Designed for adults, the apps offer customizable difficulty levels to support individuals with severe to mild aphasia, including options for two-choice answers and various cueing hierarchies. In addition to the mobile apps, Tactus Therapy offers a web-based **Virtual Rehab Center for SLPs**, which is a separate subscription-based platform designed to streamline preparation and documentation

for medical speech pathologists.

Key Features

- 4-in-1 Language Modalities (Speaking, Listening, Reading, Writing)
- Customizable difficulty and content (add own photos/words)
- Evidence-based treatment techniques (SFA, V-NEST)
- Score reports and progress tracking (emailable)
- Offline functionality (no Wi-Fi required for apps)
- Multiple languages (English, Spanish, German, French)

Pricing

Model: one_time

Core apps are a one-time purchase, not a subscription, ranging from \$5 to \$74.99 USD for individual apps. Bundles (e.g., Tactus Aphasia Essentials \$109.99) offer a discount. A separate web-based Virtual Rehab Center for SLPs is available by subscription (\$17/month).

Starting at: USD \$5

Target Company Size: startup, small, medium
