TheraScribe

EHR software for mental health practitioners specializing in creating evidence-based treatment plans, progress notes, and clinical documentation.

https://www.therascribe.com

Overview

TheraScribe is a comprehensive Electronic Health Record (EHR) system designed specifically for mental health professionals, including therapists, counselors, and psychologists. Its core value proposition is to streamline complex clinical documentation and reduce administrative paperwork, allowing practitioners to focus more on patient care. The software is tightly integrated with the renowned **Wiley Practice Planner Series**, providing users with a vast, unmatched library of prewritten, evidence-based content.

Key capabilities include the ability to quickly generate compliant and customized treatment plans in 20 minutes or less by using a point-and-click method to select from thousands of prewritten Symptoms, Diagnoses, Goals, Objectives, and Interventions. It supports the creation of integrated progress notes (e.g., SOAP/DAP format) that track directly with the client's treatment plan. The system also includes features for appointment scheduling (with Outlook export capability), medical billing, client management, and robust reporting tools to track patient progress and treatment outcomes. The software is praised for its intuitive, user-friendly interface that mirrors the clinical thought process, making it easy to learn and use for both new and veteran clinicians.

Target Users: Individual practitioners, small to midsize mental health practices, and large enterprises in the mental health care industry.

Key Features

- Evidence-Based Treatment Planning
- Integrated Progress Notes (SOAP/DAP)
- Wiley Practice Planner Content Library

- Appointment Scheduling/Management

- Medical Billing Functionality

- Customizable Clinical Pathways

- Client Management System

- Robust Reporting Tools
