

Veeva Vault RIM

A cloud-based Regulatory Information Management (RIM) solution that unifies regulatory systems and processes for end-to-end submission and registration management.

<https://www.veeva.com/>

Overview

Veeva Vault RIM is a suite of cloud-based applications built on the Veeva Vault Platform, designed to provide a single, authoritative source for regulatory documents and information globally for life sciences companies. The suite includes four core applications: **Vault Registrations** (for planning, tracking, and reporting on global product registrations, health authority interactions, and IDMP compliance), **Vault Submissions** (for content management, planning, authoring, review, and approval of regulatory submissions), **Vault Submissions Publishing** (for producing compliant published submissions, including eCTD, and accelerating delivery), and **Vault Submissions Archive** (for secure storage, navigation, and search of submitted regulatory applications).

By unifying content and data on a single platform, Vault RIM eliminates information silos, reduces data duplication, and streamlines cross-functional business processes involving clinical, quality, and safety teams (via Veeva Development Cloud connections). This leads to faster speed to market, stronger compliance, and global alignment of regulatory efforts. The system is GxP and 21 CFR Part 11 compliant, offering robust audit trails, electronic signatures, and automated compliance updates to adapt to evolving global regulatory requirements.

Key Features

- Unified Regulatory Data Management (Single Source of Truth)
- Global Product Registrations Management (IDMP compliant)

- Regulatory Submissions Planning and Tracking
- eCTD/Non-eCTD Submissions Publishing and Validation
- Submissions Archive and eCTD Viewer
- Health Authority Interactions and Commitments Tracking
- Active Dossier Management
- Electronic Signatures and Audit Trails

Pricing

Model: enterprise
