Overview

Veoci Healthcare, powered by the Veoci no-code platform, is a comprehensive solution for emergency management, crisis response, and business continuity specifically tailored for hospitals and health systems. The core product for this sector is **Veoci Vitals EM**, a holistic emergency management software designed to help healthcare emergency managers successfully handle incidents, Hazard Vulnerability Assessments (HVAs), After Action Reports (AARs), accreditation, and Governance, Risk, and Compliance (GRC) challenges.

As a no-code application development platform, Veoci offers immense flexibility, allowing users to digitize plans, set up customized workflows, and automate alerts without needing to code. This enables rapid implementation and configuration to meet unique organizational needs, from simple approval forms to highly complex continuity management programs.

Key capabilities include real-time situational awareness, often enhanced by GIS mapping, and a suite of tools for streamlined communication and collaboration, including mass notification. The platform is cloud-based, ensuring an always-on virtual Emergency Operations Center (EOC) that connects all teams, departments, and external stakeholders during a crisis.

Main Features and Capabilities:

Incident Management & Response: Digital IRGs (Incident Response Guides), real-time incident tracking, and task management.
Compliance & Audit: Compliance tracking, audit trails, and automated reporting for regulatory and accreditation requirements (e.g., CMS guidelines).
Planning & Assessment: Hazard Vulnerability Assessments (HVAs), Business Impact Analysis, Plan Development, and Continuity of Operations Planning (COOP).

Daily Operations: Environment of Care Rounding, Asset Management, Fire Drill Management, and Daily Safety Huddles.

Communication: Mass Notification/Emergency Notification System, secure real-time messaging, and collaboration tools.

Target Users and Use Cases: Veoci serves a wide range of organizations, including **Hospitals & Healthcare Systems**, as well as government, aviation, and higher education. The flexible pricing model and no-code nature make it accessible for small entities up to large enterprises. Primary use cases revolve around maintaining continuity of care, enhancing emergency preparedness, and simplifying complex compliance and operational tasks.

Key Features

- No-code Application Platform

- Veoci Vitals EM (Healthcare-specific solution)

- Incident Management & Response

- Hazard Vulnerability Assessments (HVA)

- Business Continuity & COOP Planning

- Mass Notification / Emergency Notification System

- GIS Mapping & Situational Awareness

- Compliance Tracking & Audit Trails
